Projects

Image Coupling using the Image Blending Techniques

Jan 2018 – Mar 2018

Project description:

The composite image must consist of images placed at the right position and the aim is to make the edges between images invisible. The quality of blending is therefore expressed by measuring both the correspondence between adjacent stitched images that form the composite image and the visibility of the seam between the stitched images.

Login System Using PHP and MYSQL

This Project Consist of HTML5 ,CSS3 as the Front End and MYSQL as the Backend which is the complete login and Registration Form ,User Can enter the required Details Mentioned in the Form and the details Will be stored in the backend database Which will form a Complete Full Stacck APP

Hobbies

Traveling, Reading Books,
